SUBJECT INDEX

METALS & ALLOYS

VOLUME 1—JULY 1929 TO DECEMBER 1930

A.S.T.M. test data, corrosion of iron. (cor. abs.)—H. W. Gillett. 116

Abrasives, metal.—A. B. McDaniel. 614

Acid pickling, protecting iron by cathodic treatment.—U. R. Evans & J. Stockdale. 377–378

Age hardening lead-calcium alloys.—Earle E. Schumacher & George M. Bouton. 405–409

Aging effect on toughness of low-carbon steel. (crit. abs.)—L. R. van Wert. 172–175

Aircraft, aluminum and its alloys in.—T. W. Bossert. 325–326

——construction metals.—J. B. Johnson. 450–454

——construction metals.—Bradley Stoughton. 317–324

——magnesium and its alloys in.—H. G. Harvey. 365–367

Alclad, corrosion resisting testing. (crit. abs.)—H. S. Rawdon. 235–236

Alpha-veining and the A_3 change in iron. (crit. abs.)—H. S. Rawdon. 334–335

Aluminum, X-ray examination at high temperatures. (trans.)—A. J. Alichanov. 30

——alloy heat treatment.—Robert J. Anderson. 721–726, 775–780

——alloys, endurance limit of heat treated. (cor. abs.)—H. W. Gillett. 21–22, 37

——alloys for pressure die casting. (crit. abs.)—H. W. Gillett. 176

——alloys, properties.—Zay Jeffries. 267–271

——and its alloys, etching reagent for macrography of.—C. M. Tucker. 655–656

——and its alloys in aircraft.—T. W. Bossert. 325–326

Aluminum Co. of America research laboratory.—Richard Rimbach. 717–720

Anneal, malleable iron—short cycle.—I. R. Valentine. 233–234

Antimony-lead alloys for cable sheathing.—R. S. Dean & J. E. Ryjord. 410–414

"Aston" process wrought iron properties.—H. W. Rawdon & O. A. Knight. 46–56

Automatic temperature control of chromium plating solutions.—R. W. Saunders. 368–370

Automotive corrosion and heat resisting steels. (ext. abs.)—C. M. Johnson. 547–553

Aviation, dependence on metallurgy.—J. B. Johnson. 450–454

Barium, electrolytic preparation.—Kenneth W. Ray. 112–113

——used to deoxidize copper.—Earle E. Schumacher, W. C. Ellis and John F. Ecke 714–716

——tin alloys.—K. W. Ray & R. G. Thompson. 314–316

Basic slags, decarburization of iron in open-hearth furnace and concentration of free ferrous oxide. (trans.)—Hermann Schenck. 674–677

Battelle Memorial Institute.—R. Rimbach. 770–774

Bend testing. (cor. abs.)—H. W. Gillett. 176

Beryllium.—Menahem Merlub-Sobel. 69–70

——and its alloys. (cor. abs.)—H. W. Gillett. 71–72

——used to deoxidize copper.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716

Bismuth wire extrusion.—J. G. Thompson. 826–827

Blistering in enameling, "microchilled" surface of some cast irons.—A. I. Krynitsky & W. N. Harrison. (ext. abs. by Emerson P. Poste) 663–666

"Blue-brittleness" effect on toughness of low-carbon steel. (crit. abs.)—L. R. van Wert. 172–175

Boiler practice, corrosion and metal protection in. (trans.)—R. Stumper. 895–896

Brass, corrosion of. (trans.)—Max Haas. 183–189

——, effect of lead on $\alpha + \beta/\beta$ equilibrium in a 60/40.—L. R. van Wert. 200–205

——, effect of silicon on properties of.—H. W. Gould & K. W. Ray. 455–457, 502–507

Brasses, uses of nickel.—Sherwood B. Seeley. 657–659

Brinell and Rockwell numbers. (ext. abs.)—S. N. Petrenko. 782–784

Bronze melting in cupola.—E. R. Darby. 812–813

——properties, silicon manganese.—R. Worthington. 513

Bureau of Standards, metallurgical research at.—H. S. Rawdon. 144–152

Cable sheathing alloys.—R. S. Dean & J. E. Ryjord. 410–414

Cadmium vs. zinc plating and status of salt-spray corrosion testing. (cor. abs.)—H. W. Gillett. 667–671

——-zinc alloys, electric conductivity, corrosion, heat treatment. (trans.)—G. Grube & A. Burkhard. 294–296, 300

Caesium, rubidium and lithium. 507, 536

Calcium-lead alloys, age hardening.—Earle E. Schumacher & George M. Bouton. 405–409

——for cable sheathing.—R. S. Dean & J. E. Ryjord. 410–414

Carbide precipitation during drawing of corrosion resistant non-magnetic chromium nickel steel. (trans.)—B. Strauss, H. Schottky & J. Hinnüber. 785–787

Carbon loss and diffusion in the malleabilizing process.—Enrique Touceda. 815

——-iron diagram. (cor. abs.)—R. L. Dowdell. 515–519

——-iron diagram. (cor. abs.)—A. I. Krynitsky, 465–469

——-iron system, solidus. O. W. Ellis. 462–464

Carburized steel, depth of case.—F. A. Firestone & E. J. Abbott. 18

Cast iron, continuous electric melting of. (cor. abs.)—H. W. Gillett. 671–673

——and its relation to blistering in enameling, "microchilled" surface of some.—A. I. Krynitsky & W. N. Harrison. (ext. abs. by Emerson P. Poste.) 663–666

——elementary facts on.—George M. Enos. 595–601

——, flow of metal in molds.—George M. Enos. 362–364, 417–419

——, production of high test. (cor. abs.)—G. Neuendorff. 620–624

——metallurgy, recent developments.—R. Moldenke. 327–328, 404

Casting structure, origin of.—(trans.) G. Tammann. 392–395

Castings, monel metal.—Fred M. Chambers. 619

Cathodic treatment for protecting iron during acid pickling.—U. R. Evans & J. Stockdale. 377–378

Cemented tungsten carbide tools, cutting tests with. (ext. abs.)—T. G. Digges. 836–839

——and dies, present status.—Zay Jeffries. 222–225

Cementite solubility line. (cor. abs.)—S. Epstein. 559–561

Chemical industry's demands on metallurgy.—B. D. Saklatwalla. 8–13

Chromium and nickel extend field of application of iron castings.—F. B. Coyle. 272–275

——electrodeposition on metals. (trans.)—W. Birett. 432–436

——nickel steel, carbide precipitation during drawing of corrosion resistant non-magnetic. (trans.)—B. Strauss, H. Schottky & J. Hinnüber. 785–787

——plating solution, automatic temperature control.—R. W. Saunders. 368–370

Cold rolling, preferred orientation produced in silver foil.—Cleveland B. Hollabaugh. 602–606

Constitutional diagram, cementite solubility line. (cor. abs.)—S. Epstein. 559–561

Control of sand in steel foundry.—H. D. Phillips. 759–762

Copper, corrosion of open valley flashings.—K. Hilding Beij. (ext. abs. by J. R. Freeman, Jr.) 615–619

——after hot rolling, recrystallization of electrolytic (trans.)—W. Tafel. 347–349

——and nickel in sodium chloride solutions, oxygen's role in the electrolytic corrosion-testing of. (crit. abs.)—H. W. Gillett. 277–278

——deoxidation with zinc, beryllium, barium strontium and lithium.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716

——effect on corrosion resistance of structural steel.—O. Bauer, O. Vogel, & C. Holthaus. (ext. abs. by V. V. Kendall) 890–895

——in silver, solubility of. (trans.)—M. Hansen. 248–250

——-lead alloys, effect of Utah shale "fluxes" on lead in.—G. L. Craig. 162–165

——-nickel alloy properties.—R. Worthington. 513

——-zinc alloy properties.—R. Worthington. 513

Corrosion, electric conductivity, heat treatment of cadmium-zinc alloys. (trans.)—G. Grube & A. Burkhard. 294–296, 300

——and heat-resisting steels. (ext. abs.)—C. M. Johnson. 547–553

——and its prevention in oil industry. (cor. abs.)—H. W. Gillett. 379–380

——and metal protection in boiler practice. (trans.)—R. Stumper. 895–896

——of brass. (trans.)—Max Haas. 183–189

——of iron, A.S.T.M. test data. (cor. abs.)—H. W. Gillett. 116

——of open valley flashings.—K. Hilding Beij. (ext. abs. by J. R. Freeman, Jr.) 615–619

——prevention by zinc-containing lubricant.—(crit. abs.) V. V. Kendall. 281–283

——resistance of structural steel, influence of a small addition of copper on.—O. Bauer, O. Vogel & C. Holthaus. (ext. abs.)—V. V. Kendall. 890–895

——resistant non-magnetic chromium nickel steel, carbide precipitation during. (trans.)—B. Strauss, H. Schottky & J. Hinnüber. 785–787

——testing, cadmium vs. zinc plating and status of salt spray. (cor. abs.)—H. W. Gillett. 667–671

——-fatigue (crit. abs.)—H. W. Gillett. 562

——-fatigue of steel. (cor. abs.)—H. W. Gillett. 116–117

——-fatigue of steel, zinc as the protective coating.—Wilber E. Harvey. 458–461

——-resistance testing of Alclad. (crit. abs.)—H. S. Rawdon. 235–236

——-testing of copper and nickel in sodium chloride solutions, oxygen's role in the electrolytic. (crit. abs.)—H. W. Gillett. 277–278

Cracks, slip lines and strain lines in metals under repeated stress. (crit. abs.)—H. W. Gillett. 731

Creep—Present aspects of materials for high temperature service from creep design standpoint.—J. J. Kanter & L. W. Spring. 880–882

Cupola melting of bronze.—E. R. Darby. 812–813

Cutting tests with cemented tungsten carbide tools. (ext. abs.)—T. G. Digges. 836–839

Dead-weight testing machine of 100,000 lbs. capacity. (ext. abs.)—L. B. Tuckerman, H. L. Whittemore & S. L. Petrenko. 661–662

Decarburization of iron in open-hearth furnace and concentration of free ferrous oxide in basic slags. (trans.)—Hermann Schenck. 674–677

Defects—Hair line cracks on the surface of plates. (trans.)—Erich A. Mateyka. 80–81

Deoxidation of copper with zinc, beryllium. barium, strontium and lithium.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716

Depth of case on carburized steel.—F. A. Firestone & E. J. Abbott. 18

Die casting, aluminum alloys for pressure. (crit. abs.)—H. W. Gillett. 176

——, zinc base.—W. M. Peirce. 544–546

Diffusion and carbon loss in the malleablizing process.—Enrique Touceda. 815

Dilatometric experiments of the thermic effects when tempering duralumin and its structural constituents. (trans.)—M. Haas & H. Hecker. 124–130

Double iron-carbon diagram. (cor. abs.)—A. I. Krynitsky. 465–469

Drawing of corrosion resistant non-magnetic chromium nickel steel, carbide precipitation during. (trans.)—B. Strauss, H. Schottky & J. Hinnüber. 785–787

Duralumin, dilatometric experiments of the thermic effects of tempering. (trans.)—M. Haas & H. Hecker. 124–130

Economic importance of research.—Willis R. Whitney. 370–372

Effects of silicon on brass properties.—H. W. Gould & K. W. Ray. 455–457, 502–507

Electric conductivity, corrosion, heat treatment of cadmium-zinc alloys. (trans.)—G. Grube & A. Burkhard. 294–296, 300

——melting of cast iron, continuous. (cor. abs.)—H. W. Gillett. 671–673

Electrodeposition of chromium on metals. (trans.)—W. Birett. 432–436

Electrolytic copper after hot roiling, recrystallization of.—W. Tafel. 347–349

East Engin.
Faxon

——preparation of barium and strontium alloys.—Kenneth W. Ray. 112–113

Elevated temperatures, tensile properties of rail and other steels at.—J. R. Freeman, Jr. & G. W. Quick. (ext. abs. by Richard Rimbach) 556–558

Enameling, "microchilled" surface of some cast irons blistering in.—A. I. Krynitsky & W. N. Harrison. (ext. abs. by Emerson P. Poste) 663–666

Endurance limit of heat-treated aluminum alloys. (cor. abs.)—H. W. Gillett. 21–22, 37

——testing of metals. (cor. abs.)—H. W. Gillett. 19–21

Enlargement of X-rays, possibility of.—Frederick Sillers, Jr. 225, 236

Etching reagent for macrography of aluminum and its alloys.—C. M. Tucker. 655–656

Extrusion of bismuth wire.—J. G. Thompson. 826–827

Fatigue and high frequency fatigue testing. (crit. abs.)—H. W. Gillett. 332–333

——of steel. (cor. abs.)—H. W. Gillett. 116–117

——test, Ikeda short-time resistance. (crit abs.)—H. W. Gillett. 520

Ferrosilicon, ocean shipment of. 373–376, 492

Fitting, piping and valve materials.—L. W. Spring & H. W. Maack. 446–449

Flow of metal (gray cast iron) in molds.—George M. Enos. 362–364, 417–419

Fluxes, effect on dispersion of lead in copper-lead alloys.—G. L. Craig. 162–165

Foundry—Cupola melting of bronze.—E. R. Darby. 812–813

——-Using off-peak power for melting gray iron.—W. R. Jennings. 814–815

——, sand control in steel.—H. D. Phillips. 759–762

Furnace for heat treatment.—Robert M. Keeney. 589–594

Gamma ray radiography.—C. S. Barrett, R. A. Gezelius & R. F. Mehl. 872–879

Grain size influence on magnetic properties of iron.—T. D. Yensen. 493–495

Hair line cracks on the surface of plates. (trans.)—Erich A. Mateyka. 80–81

Hardness of magnesium alloys.—L. B. Grand & A. W. Winston. 514

Hardening of metals, lattice distortion as a factor in. (crit. abs.)—H. W. Gillett. 781

Heat and corrosion-resisting steels. (ext. abs.)—C. M. Johnson. 547–553

——for heat treatment.—Robert M. Keeney 755–759

——treatment, corrosion, electric conductivity of cadmium-zinc alloys. (trans.)—G. Grube & A. Burkhard. 294–296, 300

——treatment, industrial heating for.—Robert M. Keeney. 508–513

——treatment furnace form.—Robert M. Keeney. 589–594

——treatment heat sources.—Robert M. Keeney. 755–759

——-treatment of aluminum alloys.—Robert J. Anderson. 721–726, 775–780

Heating for heat treatment.—Robert M. Keeney. 508–513

Heat-treated low carbon steel structure.—Welton J. Crook & Howard S. Taylor. 539–543

High temperature service from the creep design standpoint, present aspects of materials for.—J. J. Kanter & L. W. Spring. 880–882

——test cast iron production. (cor. abs.)—G. Neuendorff. 620–624

Historical—Fifty years of physical metallurgy.—H. W. Boylston. 329–331

——-Foreign advances in production of high test cast iron. (cor. abs.)—G. Neuendorff. 620–624

——-Two decades of precipitation hardening alloys.—Zay Jeffries. 3–4

Hydrogen and nitrogen occlusion by pure iron and some other metals. (cor. abs.)—Erich Martin. 831–835

Ikeda short-time resistance test for fatigue. (crit. abs.)—H. W. Gillett. 520

Inclusions in steel, origin and effect of.—B. M. Larsen. 703–713, 763–769, 819–825

Interstate Commerce Commission reports on rail failures. (crit. abs.)—H. W. Gillett. 381

Iron, corrosion. (cor. abs.)—H. W. Gillett. 116

——and iron-nickel alloys, X-ray study of A_3 point.—Oscar L. Roberts & Wheeler P. Davey. 648–654, 673

——-carbon diagram. (cor. abs.)—R. L. Dowdell. 515–519

——-carbon diagram. (cor. abs.)—A. I. Krynitsky. 465–469

——-carbon system, influence of oxygen and nitrogen on. (cor. abs.)—H. W. Gillett. 237–239

——-carbon system, solidus.—O. W. Ellis. 462–464

——castings, nickel and chromium extend field of application of.—F. B. Coyle. 272–275

——-nitrogen alloys, quenching and drawing below A_1 point. (trans.)—Werner Köster. 571–575

——-nitrogen system. (cor. abs.)—Robert F. Mehl & Charles S. Barrett. 422–423

——-precipitation hardening. (trans.)—Walter Eilender & Roland Wasmuht. 732–735

Laboratories—Battelle Memorial Institute.—R. Rimbach. 770–774

——Aluminum Co. of America.—Richard Rimbach. 717–720

——Ontario Research Foundation.—Richard Rimbach. 816–818

Lattice distortion as a factor in hardening of metals. (crit. abs.)—H. W. Gillett. 781

Lead, effect on $\alpha + \beta$-β equilibrium in a 60/40 brass.—L. R. van Wert. 200–205

——in copper-lead alloys, effect of Utah shale "fluxes" on dispersion.—G. L. Craig. 162–165

——-antimony alloys for cable sheathing.—R. S. Dean & J. E. Ryjord. 410–414

——-calcium alloys, age hardening.—Earle E. Schumacher & George M. Bouton. 405–409

——-calcium alloys for cable sheathing.—R. S. Dean & J. E. Ryjord. 410–414

Light alloys, properties.—Zay Jeffries. 267–271

Lithium, caesium and rubidium. 507, 536

——used to deoxidize copper.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716

Lubricant, zinc-containing for corrosion prevention. (crit. abs.)—V. V. Kendall. 281–283

Machining—Cutting tests with cemented tungsten carbide tools. (ext. abs.)—T. G. Digges. 836–839

Macrography of aluminum and its alloys, etching reagent for.—C. M. Tucker. 655–656

Magnesium alloy hardness values.—L. B. Grand & A. W. Winston. 514

——alloys, properties.—Zay Jeffries. 267–271

——and its alloys in aircraft.—H. G. Harvey. 365–367

Magnetic properties of iron, influence of grain size.—T. D. Yensen. 493–495

Malleable iron, short cycle anneal.—I. R. Valentine. 233–234

Malleablizing process, carbon loss and diffusion in.—Enrique Touceda. 815

Manganese and its alloys. (trans.)—R. Cazaud. 678–680

Mechanical and metallurgical properties of spring steels. (crit. abs.)—H. W. Gillett. 117

——working, melting, physical properties of rhodium.—Wm. H. Swanger. 263–267

Melting bronze in cupola.—E. R. Darby. 812–813

——gray iron with off-peak power.—W. R. Jennings. 814–815

——, mechanical working, physical properties of rhodium.—Wm. H. Swanger. 263–267

——of cast iron, continuous electric. (cor. abs.)—H. W. Gillett. 671–673

——of quality steel, vacuum. (cor. abs.)—H. W. Gillett. 72–73

Metal abrasives.—A. B. McDaniel. 614

——protection and corrosion in boiler practice. (trans.)—R. Stumper. 895–896

Metallographic polishing machine, automatic. S. Epstein & J. P. Buckley. 226–231

——sample preparation, automatic.—R. G. Guthrie & J. A. Comstock. 727–730

Metallurgical and mechanical properties of spring steels. (crit. abs.)—H. W. Gillett. 117

——research at Bureau of Standards.—H. S. Rawdon. 144–152

——of cast iron, recent developments.—R. Moldenke. 327–328, 404

Metallurgy and the power industry.—J. B. Romer. 868–870

——in chemical industry.—B. D. Saklatwalla. 8–13

——of valve, fitting and piping materials.—L. W. Spring & H. W. Maack. 446–449

Metals in aircraft construction.—Bradley Stoughton. 317–324

——used in aircraft construction.—J. B. Johnson. 450–454

Metastable iron-carbon constitution diagram. (cor. abs.)—R. L. Dowdell. 515–519

"Microchilled" surface of some cast irons and relation to blistering in enameling.—A. I. Krynitsky & W. N. Harrison (ext. abs. by Emerson P. Poste.) 663–666

Molding sands.—George M. Enos. 496–501

Monel metal castings.—Fred M. Chambers. 619

Muntz metal, effect of lead on $\alpha + \beta/\beta$ equilibrium.—L. R. van Wert. 200–205

Newspaper industry type metals.—John Helfrich. 420–421

Nickel and chromium extend field of application of iron castings.—F. B. Coyle. 272–275

——and copper in sodium chloride solutions, oxygen's role in the electrolytic corrosion-testing of. (crit. abs.)—H. W. Gillett. 277–278

——brasses, uses of.—Sherwood B. Seeley. 657–659

——copper alloy properties.—R. Worthington. 513

——iron system. (trans.)—G. F. Sizoo & C. Zwikker. 29–30

Nitrogen and hydrogen occlusion by pure iron and some other metals. (cor. abs.)—Erich Martin. 831–835

——and oxygen influence on iron-carbon system. (cor. abs.) H. W. Gillett. 237–239

——iron alloys, quenching and drawing below A_1 point. (trans.)—Werner Köster. 571–575

——iron system. (cor. abs.)—Robert F. Mehl & Charles S. Barrett. 422–423

Notch propagation. (cor. abs.)—H. W. Gillett. 114–116

Occlusion of hydrogen and nitrogen by pure iron and some other metals. (cor. abs.)—Erich Martin. 831–835

Off-peak power for melting gray iron.—W. R. Jennings. 814–815

Oil industry, corrosion and its prevention. (cor. abs.)—H. W. Gillett. 379–380

Ontario Research Foundation Metallurgical Laboratories.—Richard Rimbach. 816–818

Open-hearth furnace and concentration of free ferrous oxide in basic slags, decarburization of iron in. (trans.)—Hermann Schenck. 674–677

Ordnance—strategic raw materials.—Roger Taylor. 5–7

Orientation in silver foil produced by cold rolling.—Cleveland B. Hollabaugh. 602–606

Oxygen and nitrogen influence on iron-carbon system. (cor. abs.)—H. W. Gillett. 237–239

Oxygen's role in the electrolytic corrosion-testing of copper and nickel in sodium chloride solutions. (crit. abs.)—H. W. Gillett. 277–278

Pedigree vs. research precision steel.—G. M. Eaton. 415–416

Physical chemistry of steel-making. (cor. abs.)—Alex. L. Feild. 279–281

——chemistry of steel making.—C. H. Herty, Jr. 883–889.

——metallurgy, 50 years of.—H. W. Boylston. 329–331

——properties, mechanical working, melting of rhodium.—Wm. H. Swanger. 263–267

Piping, valve and fitting materials.—L. W. Spring & H. W. Maack. 446–449

Plates—Hair line surface cracks. (trans.)—Erich A. Mateyka. 80–81

Power industry and metallurgy.—J. B. Romer. 868–870

Precipitation hardening alloys, two decades of.—Zay Jeffries. 3–4

——hardening of iron. (trans.)—Walter Eilender & Roland Wasmuht. 732–735

Preparation of metallographic samples, automatic.—R. G. Guthrie & J. A. Comstock. 727–730

Properties at elevated temperatures of aluminum and aluminum alloys.—Zay Jeffries. 267–271

——of aluminum and aluminum alloys, physical.—Zay Jeffries. 267–271

——of aluminum and its alloys.—T. W. Bossert 325–326

——of brass, effect of silicon.—H. W. Gould & K. W. Ray. 455–457, 502–507

——of copper-zinc, silicon-manganese bronze and nickel-copper alloys.—R. Worthington. 513

——of hand-puddled and "Aston" process wrought iron.—H. S. Rawdon & O. A Knight. 46–56

——of iron-nitrogen alloys, quenching and drawing below A_1 point. (trans.)—Werner Köster. 571–575

——of lead-calcium alloys.—R. S. Dean & J. E. Ryjord. 410–414

——of lead-calcium alloys.—Earle E. Schumacher & George M. Bouton. 405–409

——of magnesium alloys, physical.—Zay Jeffries. 257–271

——of magnesium and its alloys.—H. G. Harvey. 365–367

——of spring steels, mechanical and metallurgical. (crit. abs.)—H. W. Gillett. 117

——in tin.—C. L. Mantell. 645–648

Protecting iron during acid pickling by cathodic treatment.—U. R. Evans & J. Stockdale. 377–378

Protection and corrosion of metals in boiler practice. (trans.)—R. Stumper. 895–896

Quenching and drawing of iron-nitrogen alloys below A_1 point. (trans.)—Werner Köster. 571–575

Radiography by gamma rays.—C. S. Barrett, R. Gezelius & R. F. Mehl. 872–879

Rail failures, Interstate Commerce Commission. (crit. abs.)—H. W. Gillett. 381

——production. (crit. abs.)—H. W. Gillett. 625
——steel tensile properties at elevated temperatures.—J. R. Freeman, Jr. & G. W. Quick. (ext. abs. by Richard Rimbach.) 556–558
Rails, transverse fissures in.—M. E. McDonnell. 93–97
Railway rail progress. (crit. abs.)—H. W. Gillett. 625
Recrystallization of electrolytic copper after hot rolling.—W. Tafel. 347–349
Relationship between Rockwell and Brinell numbers. (ext. abs.)—S. N. Petrenko. 782–784
Repeated stress; slip lines, strain lines and cracks in metals under. (crit. abs.)—H. W. Gillett. 731
Research, its economic importance.—Willis R. Whitney. 370–372

——at Bureau of Standards, metallurgical.—H. S. Rawdon. 144–152
——laboratory of Aluminum Co. of America.—Richard Rimbach. 717–720
——laboratory—Battelle Memorial Institute.—R. Rimbach. 770–774
——metallurgical laboratories, Ontario Research Foundation.—Richard Rimbach. 816–818
——precision vs. pedigree steel.—G. M. Eaton. 415–416
Rhodium, melting, mechanical working, physical properties.—Wm. H. Swanger. 263–267
Rockwell and Brinell numbers. (ext. abs.)—S. N. Petrenko. 782–784
Rubidium, lithium and caesium.—507, 536
Russia—X-ray investigation of metals in the U.S.S.R.—E. F. Bachmetew. 828–830

Salt-spray corrosion testing, cadmium vs. zinc plating and status of. (cor. abs.)—H. W. Gillett. 667–671
Sand control in steel foundry.—H. D. Phillips. 759–762
Shipment of ferrosilicon, ocean.—373–376, 492
Silicon. (Editorial.)—H. W. Gillett. 491
——-effect on brass properties.—H. W. Gould & K. W. Ray. 455–457, 502–507
——-manganese bronze properties.—R. Worthington. 513
Silver, solubility of copper in. (trans.)—M. Hansen. 248–250
——foil, preferred orientation produced by cold rolling.—Cleveland B. Hollabaugh. 602–606
Slip lines, strain lines and cracks in metals under repeated stress. (crit. abs.) H. W. Gillett. 731
Solder for electrical apparatus, new.—James Silberstein. 659–660
Solidus of iron–carbon system.—O. W. Ellis. 462–464
Spectrographic analysis of iron and steel. (trans.)—K. Kellerman. 480–483
Steel, effect of aging and of "blue brittleness" on toughness of low carbon. (crit. abs.)—L. R. van Wert. 172–175
——, fatigue and corrosion fatigue. (cor. abs.)—H. W. Gillett. 116–117
——, structure of heat-treated low carbon.—Welton J. Crook & Howard S. Taylor. 539–543
——foundry sand control. H. D. Phillips. 759–762
——inclusions, origin and effect of.—B. M. Larsen. 703–713, 763–769, 819–825
——-making, physical chemistry of. (cor. abs.)—Alex. L. Feild. 279–281
——making, physical chemistry of.—C. H. Herty, Jr. 883–889
Steels, corrosion and heat-resisting. (ext. abs.)—C. M. Johnson. 547–553
——, mechanical and metallurgical properties of spring. (crit. abs.)—H. W. Gillett. 117
——, tensile properties of rail and other steels at elevated temperatures.—J. R. Freeman, Jr. & G. W. Quick. (ext. abs.)—Richard Rimbach. 556–558
Strain lines, slip lines and cracks in metals under repeated stress. (crit. abs.)—H. W. Gillett. 731
Strontium, electrolytic preparation.—Kenneth W. Ray. 112–113
——used to deoxidize copper.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716
Structure of heat-treated low carbon steel.—Welton J. Crook & Howard S. Taylor. 539–543
Surface cracks on plates. (trans.)—Erich A. Mateyka. 80–81

Temperature control of chromium plating solutions, automatic.—R. W. Saunders. 368–370
——controller at McGill University.—Gordon Sproule. 554–555
Tempering duralumin and its structural constituents, dilatometric experiments of the thermic effects. (trans.)—M. Haas & H. Hecker. 124–130
Tensile properties of rail and other steels at elevated temperatures.—J. R. Freeman, Jr. & G. W. Quick. (ext. abs.)—Richard Rimbach. 556–558
Testing, bend. (cor. abs.)—H. W. Gillett. 176
——, fatigue and high frequency fatigue. (crit. abs.)—H. W. Gillett. 332–333
——machine of 100,000 lbs. capacity, dead weight. (ext. abs.)—L. B. Tuckerman, H. L. Whittemore & S. L. Petrenko. 661–662
——methods for welds.—George B. Moynahan. 607–612
Tin, world reserves and United States consumption. 654, 673
——for fabrication, selection of.—C. L. Mantell. 645–648
——-barium alloys.—K. W. Ray & R. G. Thompson. 314–316
Toughness of low-carbon steel, effect of aging and of "blue brittleness" on. (crit. abs.)—L. R. van Wert. 172–175
Transverse fissures in rails.—M. E. McDonnell. 93–97
Tungsten carbide tools, cutting tests with. (ext. abs.)—T. G. Digges. 836–839
——carbide tools and dies, present status of cemented.—Zay Jeffries. 222–225
Type metals in newspaper industry.—John Helfrich. 420–421

Utah shale "fluxes," effect on dispersion of lead in copper-lead alloys.—G. L. Craig. 162–165

Vacuum melting for quality steel. (cor. abs.)—H. W. Gillett. 72–73
Valve, fitting and piping materials.—L. W. Spring & H. W. Maack. 446–449

Weld testing methods.—George B. Moynahan. 607–612
Welding of structural steel.—F. P. McKibben 328
Wire, extrusion of bismuth.—J. G. Thompson. 826–827
Working, physical properties, melting of rhodium.—Wm. H. Swanger. 263–267
World reserves of tin and United States consumption. 654, 673
Wrought iron, properties of hand-puddled and "Aston" process.—H. S. Rawdon & O. A. Knight. 46–56

X-ray examination of aluminum at high temperatures. (trans.)—A. J. Alichanov. 30
——investigation of cold rolled silver foil.—Cleveland B. Hollabaugh. 602–606
——investigations of metals in the U.S.S.R.—E. F. Bachmetew. 828–830
——metallography in 1929.—George L. Clark. 14–17, 57–68, 98–111, 153–161, 206–221
——study of A_3 point of iron and iron-nickel alloys.—Oscar L. Roberts & Wheeler P. Davey. 648–654, 673
X-rays, possibility of enlargement of.—Frederick Sillers, Jr. 225, 236

Zinc base die casting.—W. M. Peirce. 544–546
——protective coating against corrosion fatigue of steel.—Wilber E. Harvey. 458–461
——used to deoxidize copper.—Earle E. Schumacher, W. C. Ellis & John F. Eckel. 714–716
——vs. cadmium plating and status of salt-spray corrosin testing. (cor. abs.)—H. W. Gillett. 667–671
——-cadmium alloys, electric conductivity, corrosion, heat treatment. (trans.)—G. Grube & A. Burkhard. 294–296, 300
——-containing lubricant for corrosion prevention. (crit. abs.)—V. V. Kendall. 281–283
——copper alloy properties.—R. Worthington, 513

Library Tools for Uncovering Opportunities for Profit

The Condensed Chemical Dictionary ◆ ◆ ◆

Compiled and Edited by the Editorial Staff of The Chemical Engineering Catalog.

Second Edition Revised and Enlarged 1930

The New Dictionary contains 5000 new items not listed in the 1919 Edition.

551 Pages—*with Thumb Index*

Board Library Buckram $10.00
Flexible Keratol . . . $12.00

The Dictionary places at your disposal in a simplified and readily accessible form, a library of essential technical and commercial data on organic and inorganic chemicals, the medicinals, metals and alloys, minerals, fertilizers, explosives, pigments, oils and raw materials in general use.

Arranged in a straight alphabetical classification, it gives the following facts about 12,000 chemicals (including cross references):

Names of Chemicals and Substances
Uses
Chemical Formulas
Colors
Properties
Constants
Specific Gravities
Melting Points
Boiling Points
Solubility
Materials from which they are made
Grades
Method of Manufacture
Method of Purification
Shipping Containers and their sizes
Fire Hazards
Railroad Shipping Regulations

Sheet Steel and Tin Plate

R. W. SHANNON

285 Pages Illustrated Price $5.00

A PRACTICAL work on the utilization of sheet steel and tin plate in the steel-fabricating arts. The essential facts concerning sheet steel and tin plate are clearly set forth in every-day language, enabling the layman to gain therefrom an insight into the possibilities and limitations of these important kinds of steel products, which will permit him to understand present day uses better, and possibly to visualize new uses, for these materials.

Tin

C. L. MANTELL

353 Pages Illustrated Price $7.00

A COMPREHENSIVE survey of the various phases of the production of tin from its ores to its commercial application. The history, physical and chemical properties, and the production, distribution, and consumption of the metal have been presented and discussed from the viewpoint of the chemist, the metallurgist, and the chemical engineer rather than from the viewpoint of the mining engineer or the mechanical engineer. Secondary tin and detinning of tin-plate scrap has been treated from the economic as well as from the metallurgical and chemical viewpoint.

Protective Metallic Coatings

HENRY S. RAWDON

277 Pages Illustrated Price $5.50

AN up-to-date survey of the field of corrosion prevention, or retardation, particularly from iron and steel, especially useful to the engineer, manufacturer, metallurgist and chemist. The various coating methods—hot-dipping, cementation, metal spraying, electroplating, alloying, chemical treatment, etc.—are described in detail, as are the coatings produced by these methods using zinc, tin, copper, nickel, chromium and other metals. Methods of testing such coatings are given and an extensive bibliography is appended.

419 Fourth Ave., The Chemical Catalog Co., Inc., New York, U. S. A.
